

Investment focus

The BB Adamant Asia Pacific Healthcare Fund invests in healthcare stocks of companies that have their registered office or carry out the majority of their economic activity in the healthcare markets of the Asia-Pacific region. Its investment universe consists of generics producers, pharma and biotechnology companies, medical technology and services firms. Experienced sector specialists focus on profitable companies that have a well-established product portfolio. Investments are made based on fundamental research analysis. Stock selection is exclusively bottom up, independent of benchmark weightings.

Rolling 12-month-performance

Source: Bellevue Asset Management, 31.12.2018; all figures in EUR %, total return-methodology
Past performance is not a reliable indicator of future results and can be misleading. As the subfund is denominated in a currency that may differ than an investor's base currency, changes in the rate of exchange may have an adverse effect on prices and incomes. Performance is shown net of fees and expenses for the relevant share class over the reference period. All performance figures reflect the reinvestment of dividends and do not take into account the commissions and costs incurred on the issue and redemption of shares, if any. The reference benchmark of this class is used for performance comparison purposes only (dividend reinvested). No benchmark is directly identical to a subfund, thus the performance of a benchmark is not a reliable indicator of future performance of the subfund it is compared to. There can be no assurance that a return will be achieved or that a substantial loss of capital will not be incurred.

For illustrative purposes only. Holdings and allocations are subject to change. Any reference to a specific company or security does not constitute a recommendation to buy, sell, hold or directly invest in the company or securities. Where the subfund is denominated in a currency other than an investor's base currency, changes in the rate of exchange may have an adverse effect on price and income.

Market review

Hopes that markets would rally as the year came to an end were not fulfilled, unfortunately. Quite the contrary, the MSCI World lost so much ground in December that its YTD performance slipped into the red. The healthcare sector stayed in positive territory, though, so it outperformed the total market by a wide margin in 2018 too. Fears about the state of the global economy and the ongoing US-China trade row deserve much of the blame for the growing risk aversion in the markets. The Fed's eagerly awaited FOMC meeting did not help sentiment either. At that meeting America's central bankers increased the federal funds rate for the ninth time since 2015, which poured cold water on the hopes of some bullish investors that the Fed would refrain from raising its interest rate. Asian stock markets were unable to escape the general bearish trend, while Asian healthcare stocks came under additional selling pressure due to a pilot project in China aimed at lowering drug prices.

Last month Chinese officials published the results of a tender for a centralized, government drug-buying program and, as expected, this bidding process led to significant reductions in the prices the government has to pay. The drug whose price fell the most was Chengdu Beite's Tenofovir (-91%); the drug with the smallest decline was CSPC's Azithromycin (-7%). The average discount was about 45%, which is higher than the market had generally expected. This news only added to the selling pressure on Chinese health stocks. As we had already explained in our previous monthly commentary, we think the ultimate effect of this new procurement approach will be positive. The market will become more transparent and drug quality will improve due to the requirement to provide evidence demonstrating bioequivalence.

Samsung Biologics managed to buck the general market trend during the past month and it recouped its heavy losses from the previous month in the process. South Korea's top financial regulator announced that the shares of Samsung Biologics would not be delisted and trading in the stock resumed immediately afterward, which led to a pleasing bounce of about +18%.

We took advantage of excessive selling in Chinese stocks last month and added to our shareholdings of Sino Biopharma and Wuxi Biologics. Sysmex was added to the portfolio again. The share price of Japan's premier medtech company plummeted on news of temporary problems with two of its products in China, which have since been resolved. Positions in Sinopharm and Asahi Intecc were trimmed. Hugel is no longer in the portfolio.

Positioning & outlook

The growth of Asia's healthcare sector is being driven by the rapid pace of population aging. Japan qualifies as the "world's demographic laboratory", followed by South Korea, Singapore and China, among other countries. The pace of population aging is steadily gaining momentum. The number of elderly Chinese, for example, (60 and older) is expected to swell to between 400 and 500 million within the next 30 years. Moreover, the Western lifestyle is spreading and clearly having an impact throughout the region. According to some estimates, there are already more than 100 million diabetics in China alone. In view of these developments, demand for medicine, healthcare equipment and services will grow significantly during the years ahead. Considerable sums of money are also being spent on healthcare infrastructure and technology. More reforms are in store for the regional healthcare sector and they are primarily intended to intensify research and development activity for new drugs and medical equipment. Drug manufacturers with high-value product portfolios and pipelines will be able to grow their share of the market and steadily climb the value chain.

In the mature countries of the Asian-Pacific region there are healthcare companies that have established leading positions in their targeted markets, ranging from antibody drug therapies and robotics to digitalization, diagnostics and medical imaging systems.

The BB Adamant Asia Pacific Healthcare Fund is an investment vehicle that offers defensive access to emerging healthcare markets in Asia as well as to the Pacific region's attractive healthcare technology leaders. We invest throughout the entire value chain in the healthcare industry, from generics producers and biotech firms to medical device manufacturers and hospital chains.

Risk and return profile

The Fund's objective is to generate an attractive return over a long-term horizon. It is therefore particularly suited to investors with an investment horizon of at least 5 years who want to diversify their portfolio with selective exposure to the healthcare sector in Asia and who are willing to accept the risks typically associated with stocks in this sector.

The calculation of the risk and earnings profile is based on simulated/historical data, which cannot be used as a reliable indication of the future risk profile. The classification of the fund may change in future and does not constitute a guarantee. Even a fund classed in category 1 does not constitute a completely risk-free investment. There can be no guarantee that a return will be achieved or that a substantial loss of capital will not be incurred. The overall risk exposure may have a strong impact on any return achieved by the fund or subfund. For further information please refer to the fund prospectus or KIID.

Liquidity risk

The fund may invest some of its assets in financial instruments that may in certain circumstances reach a relatively low level of liquidity, which can have an impact on the fund's liquidity.

Risk arising from the user of derivatives

The fund may conclude derivatives transactions. This increases opportunities, but also involves an increased risk of loss.

Currency risks

The fund may invest in assets denominated in a foreign currency. Changes in the rate of exchange may have an adverse effect on prices and incomes.

Operational risks and custody risks

The fund is subject to risks due to operational or human errors, which can arise at the investment company, the custodian bank, a custodian or other third parties.

Target market

The fund is suitable for retail and professional investors in Austria, Germany, Luxembourg, Spain and Switzerland.

Chances

- Access to defensive growth – Asia's emerging countries are facing aging populations and changing lifestyles.
- An interesting combination of investments in Asian emerging markets and Japanese cutting-edge technology.
- Broad spread across different sectors and company sizes in the Asia-Pacific healthcare industry.
- Attractive valuations compared with the projected medium to long-term growth.
- BB Adamant Team – top-performing pioneer in the management of healthcare portfolios in emerging markets.

Inherent risks

- The fund invests in equities. Equities are subject to price fluctuations and so are also exposed to the risk of price losses.
- Investing in emerging markets entails the additional risk of political and social instability.
- The fund invests in foreign currencies, which means a corresponding degree of currency risk against the reference currency.
- The subfund may invest in China A equities. This entails the risk of supervisory changes, volume caps and operating restrictions which may lead to a higher counterparty risk.
- The fund may invest a proportion of its assets in financial instruments that might under certain circumstances have a relatively low level of liquidity, which can in turn affect the fund's liquidity.

You can find a detailed presentation of the risks faced by this fund in the "Special Investment Risks" section of the sales prospectus.

Management Team

Oliver Kubli, CFA

Portfolio Manager since inception of the fund

Joined Bellevue in 2015 as Head Portfolio Management Healthcare Funds & Mandates. Prior to that he was from 2008 to 2014 Member of the Management Board and Head Portfolio Management at Adamant Biomedical Investments.
